In the State metabolism, including diseases such as alterosclerosts, before its of the invention are used to screen candidate molecules of substances that are capable of modulating the transcription, or the ASC across they are used in antisense therapy. Compositions comprise the region of the invention are used to treat hypercholesterolaming and are used in the present sequence is human ABCL transcription, required DNA.
                                                                                                                                                                                                                                                              isolated nucleic acid useful for modifying the ATP-Crudina cassette lacked) and screening for candidate modulatory compounds or substances
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HTELLIFELLELLELLELLELLELLE ELLE ELLE TELLE TELLE TELLE ELLE E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HTH HTH HTH HTH HTH HTH HTTL FILLE OF HTH OF HTH OF HTH OF HTH OF HTH OR AGAINST HOW HAVE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCCCAGATCGCACCATTGCACTCCAGCCTORGTAACAAAAAATGTAAATGTTAATTTTATTTTT

                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for treating a justical diagnosed as having a lower than formal higo-density lipoprotein-cholesterol (HDL-C) level, a nighter than moral triglyceride level, or a cardiovascular disease, involving administering a compound that modulutes LXR- or XXX-mediated transcriptional activity or ABC1 expression or activity. The LXR gene product may be used in an assay to intentity compounds useful for the treatment of a disease of condition selectinglyceride level, and a cardiovascular disease.

The present sequence represents the 5' flanking region of the huuman adenosine tripkusphate (ATP) binding cassette protein (AbC) 1 gene. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a privotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangler disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9422-9431. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The quenes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and

ABCI resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tangler disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI are useful for developing pharmaceutical agents for the treatment of heart disease and chier disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that requirate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for also useful dereals ouseful dereals of cardiovascular disease and

The invention relates to an isolated human large AJF binding cassette transporter 1 (ABC1) promoter capable of directing transcription of transporter 1 (aBC1) promoter capable of directing transcription of heterologous coding sequence positioned downstrear in it. in. ABPT promoter is useful for expressing foreign bind in a hest of 1. by introducing into the host cell a gene transfer vertus ceptising the promoter operably linked to a foreign bNA is expressed. The selectionary polymetride or RNA, where the foreign DNA is expressed. The selectional the gene introduced into the host cell by adenovirus interior. The selection or transfer, topical application to the cell or microhogetion. The gene transfer comparison and expresses a reporter molecule. The method further involves introducing into the cell a gene transfer vector comparison a nucleic acid segment encoding a transactivator protein capable of upregulating the ABC1 promoter, or contacting the cell with the transactivator protein, or an agonist of the transactivator protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ATP-binding cassette transporter 1(hABG1) promoter sequence.
                                    capable of directing transcription of Leterologous coding sequence positioned downstream to it, useful for expressing foreign fixe in host cells ^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated human large ATP-binding cassette transporter i promoter

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   intron
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               intron
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         exon
                                                                                                                                  exon
                                                                                                                                                                                                                                                                                                                                                 exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                exon
                                                                           CDS
   a variety of human tissue sources and which encode covel secreted proteins, their complements and sequences that hybridise to them.

Also included are a vector comprising the polynomical decreted proteins and included are a vector comprising the polynomical decreted by the polynomical proteins and identification of modulators of the proteins of the proteins and identification of modulators of the proteins of the protein conditions and proteins the the treatment of various immune deficienties and disorders (e.g. rheumatoid arthritis, muitiple selections, autoimmune disorders (e.g. rheumatoid arthritis, muitiple selections, cautoimmune thyroiditis and diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Alzheimer's disease, parkinson's disease, liver fibrosis, coaqulation disorders (e.g. haemophilia).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         =;
                                                                                                          The invention relates to 625 polynucleotides which have been derived from
                                                                                                                                                                                                                                                                                                                                                                                                                  inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopolesis, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA sequences
human tissue sources which encode secreted proteins, useful for
treating immune deficiencies and disorders such as autoismuse disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          replace (3647,A)

The invention relates to an isolated polynoclopide, which comprises
genes and haplotypes of the retinal dehyde thinding protein [REBF] gene.
The polynucleotide comprises polymorphic sites in the RibPl gene, which
are referred to as PSI-24 to designate the order in which they are
located in the gene. Also included are methods for predicting a
genotyping the RibPl gene of an individual, a method for predicting a
leaplotype pair for the RibPl gene of an individual, a method for predicting a
leaplotype pair for the RibPl gene of an individual, a method for propertion of the RibPl gene of an individual, a method for design of a least one
dentifying an association between a trait and at least one caplotype or
haplotype pair of the RibPl gene, a composition comprising a new recomposition comprising a set of oliquincieotides designed to denotype each
of PSI-PS24 recompliant non-human organism transformed to enocype each
of PSI-PS24 recompliant non-human organisms transformed to enocype each
of PSI-PS24 recompliant non-human organisms transformed to enocype or transfected
with the isolated polymorphic variant sequence or expresses an RibPl
protein encoded by the first nucleotide sequence or expresses an RibPl
protein encoded by the polymorphic variant sequence or a proprietion
of a reference sequence for the RiBPl protein or its fragment,
an anti-RiBPl antibody, a method for screening to aruqs taracting the
solated polypeptide, and a computer system for storing and adapting the
protein encoded protein and a computer system for storing and adapting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New genetic variants having polymorphisms in the retinaldelyde-binding protein 1 gene, useful for studying the function of and for expressing RLBP1 protein for use in screening drugs for treating diseases related to RLBP1 activity.
                                                                                                                                                                                                                                                                                                                                                                           /standard_name= "Single nucleotide polymorphism, SNP"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated polynucleotide, which comprises genes and haplotypes of the retinaldehyde-binding protein 1 (RLBP!) gene The polynucleotide comprises polymorphic sites in the RLBPI gene, which are referred to as PSI-24 to designate the order in which they are located in the gene. Also included are methods for haplotyping or genotyping the RLBPI gene of an individual, a method for predicting a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human gene for retinaldehyde-binding protein 1, RLBP1, geneiic sequence.
expressing RLBPI protein for use in screening candidate drugs to treat diseases related to RLBPI activity (e.g autosomal recessive retinitis pigmentosa (arRP). The methods and haplotypes are useful in improving the efficiency and output of several steps in the drug discovery and development process, including target validation, identifying lead compounds, and early phase clinical trials. These are also useful for designing clinical trials of candidate drugs for treating a specific condition or disease, as well as for screening compounds targeting RLBPI to treat a specific condition or disease predicted to be associated with RLBPI activity. The kit and method are useful for determining whether an individual has one of the haplotypes
                                                                                                                                                                                                                                           or haplotype pairs cited above. The transgenic animals are useful for studying expression of the RLBPl isogenes in vivo, for in vivo screening and testing of drugs targeted against RLBPl protein, and for testing the efficacy of therapeutic agents and compounds for retinal diseases in a biological system. The gene for RLBPl is located on chromosome 15q26. The present sequence is the gene for RLBPl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New genetic variants having polymorphisms in the retinaldehyde-binding profein I gene, useful for studying the function of and for expressing RLBP1 protein for use in screening drugs for treating diseases related to RLBP1 activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; retinaldehyde-binding protein 1; ds; RLBP1; haplotype; gene: genetyphogy probe; autosomal recessive retinitis pigmentosa: arRP; chromosome 15q26; transenic; ASO; allele specific oligonucieotide: single nucleotide polymorphism; SNP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DD 10046 CCCACCTTGCCCAAAGTGCTGGGATTACAGGCATGAGCCACTGCGCCCAG: 9992

```
polypeptide comprising an amino acid sequence that is a polymorphic variant of a reference sequence for the RiBPI protein of the reference sequence for the RiBPI protein of its fragment.

Solated polypeptide, and a computer system for true and analysing to polymorphism data for the RIBPI oncogene gene.

The polymorbhism data for the RIBPI oncogene gene to storing and analysing polymorphisms in the RIBPI, and in the polymorphism data for the RIBPI oncogene gene to storing and analysing polymorphisms in the RIBPI, and in the object of RIBPI oncogene gene of storing and analysing the expression and function of RIBPI, and in expressing RIBPI protein for use in screening candidate drugs to treat diseases related to RIBPI activity (e.g. autosomal recessive retinitis pigmentosa (arRP). The methods and haplotypes are useful in improving the efficiency and output of several steps in the drug discovery and development process, incidinging ariget, validation, dennitying lead compounds, and early phase clinical trials. These are treating a specific condition or disease compounds targeting RIBPI to treat a specific condition or disease compounds targeting RIBPI to treat a specific condition or disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
haplotype pair for the RLBP1 gene of an individual, a method for identifying an association between a trait and at least one haplotype or haplotype pair of the RLBP1 gene, a composition comprision at least one genotyping oligonucleotide for detecting a comprishism it the RLBP1 gene at a PS consisting of PSI-PS24, a kit for genotyping the RLBP1 gene of an individual comprising a set of oligonucleotides designed to genotype each of PSI-PS24 recombinant non-human organisms transformed or transferred with the isolated polynucleotide, where the organism expresses a RLBP1 protein encoded by the first nucleotide sequence or expresses an KLBP1 protein encoded by the polymorphic variant sequence or expresses an RLBP1 protein encoded by the polymorphic variant sequence an isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         diseases in a biological system. The gene for RLBP) is ideated on chromosome 15926. The present sequence is a representation of the gene for RLBPI encompassing all the single nucleatide polymorphisms in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             useful for determining whether an individual has one of the hapicrypes or haplotype pairs cited above. The transpenic animals are useful for studying expression of the RLBPI isouenes in vivo, tor in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bovine butyrophilin, BT: human hereditary haemochromatosis, HFE; diagnosis, iron metabolism, NPT4; NOT4; MORCH; HTF1; HTF2; HTF3; BTF4; BTF5; milk protein: lugas; Sjoqren's syndrome; hypophosphatemia; type 1 sodium transport gene: ss.

unaffected by hereditary harmonomous (HH). Also described is a method to determine the presence or absence of the common hereditary harmonomous (HH). Also described is a method to determine the presence or absence of the common hereditary harmonomous (HF) game mutation in an individual comprising:

(a) providing DNA or RNA from the individual; and (b) assessing the the presence or absence of the haplotype genotype indicates the likely presence of the HFE gene mutation in the genome of the individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present invention also describes BTF genes, which are homologues of the milk protein butyrophilin (HT), and can be used in the production of agonists and antagonists of BT function. Also described are: (1) a Roket gene and antagonists of BT function. Also described are: (1) a Roket gene which can be used to develop products for the study, diagnosis and treatment of lupus and Slogren's syndrome, and (2) NPT3 and can can homologues of a type I sodium transport gene, and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bovine butyrophilin: BT: human hereditary haemochromatosis: HFE: diaquosis: iron metubolism: NPT3; NPT4; RoRet; BTF1; BTF2; BTF3; BTF5; milk protein: lupus: Sjogren's syndrome; hypophosphatemia; type I sodium transport gene: Ss.
                                                                                                                                                                                                                                                                                                      products from the human haemochromatosis gene. The present equence represents a hereditary haemochromatosis subregion from an individual
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hereditary haemochromatosis subregion from an HH affected individual.

                                                                                                                    with cytostatic activity. The polynucleotide is used to produce a polypeptide, to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and to inhibit tumour growth. The polynucleotide is used as morph in mapping and tissue protiling. The encoded polypeptide and antibodies to the polypeptide can also be used for therapoutic and diagnostic purposes. The polynucleotide is useful for
                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                       invention relates to an isolated polynucleotide (ABN27253-ABN33262)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human riboscoral Sli protein 12 and encoded polynucleotide, applicable in diagnosis and treatment of malignant tumour, haemopathy, human immunodeticiency virus infection, immunological discases and
New nucleic acid for producing a polypeptide, detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, and inhibiting tumor growth -
                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; ribosomal $11 protein 12; cytostatic; virucidal;

                  cytostatic, virucidal, immunomodulatory, antiinflammatory and haemostatic activity. The proletin and encoding polymeticolide are used in diagnosis and treatment of malignant tunnour, haemopa'hy, branan immunodeficiency virus (HV) infectious, immunoicotica, diseases and various inflammations. The polymucleotide is useful in seme therapy.
                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                              Sedary syndrome; Gaucher's disease; neurological diseases;
